Putting Software Testing Terminology to the Test

M.A.Sc. Seminar

Samuel Crawford, B.Eng.

McMaster University
Department of Computing and Software

Fall 2024

Table of Contents

Table of Contents

The Need for Standardized Terminology

- Engineering is applied science
- Scientific fields use precise terminology
- Therefore, the same should be true of software engineering!

The Need for Standardized Terminology

- Engineering is applied science
- Scientific fields use precise terminology
- Therefore, the same should be true of software engineering!
- Imagine if other fields used unclear, inconsistent, and incorrect terminology:
  - Force
  - Isotope
  - Phalange

The Need for Standardized Terminology

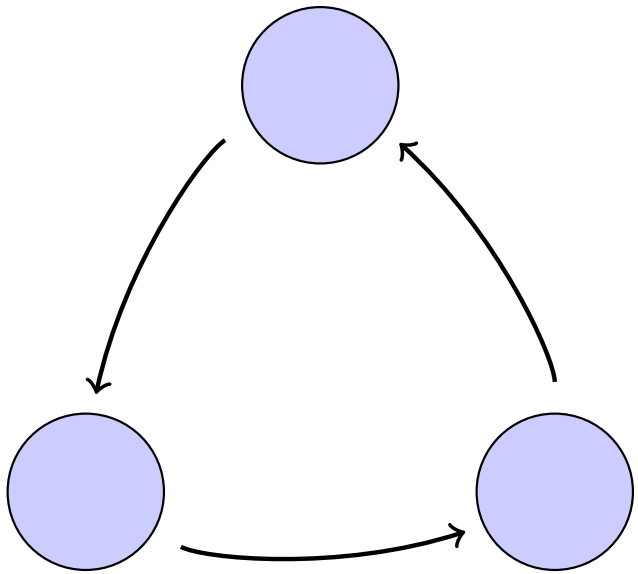
- Engineering is applied science
- Scientific fields use precise terminology
- Therefore, the same should be true of software engineering!
- Imagine if other fields used unclear, inconsistent, and incorrect terminology:
  - Force
  - Isotope
  - Phalange

If software engineering holds code to high standards of clarity, consistency, and robustness, the same should apply to its supporting literature!

Improved Communication

Interorganizational

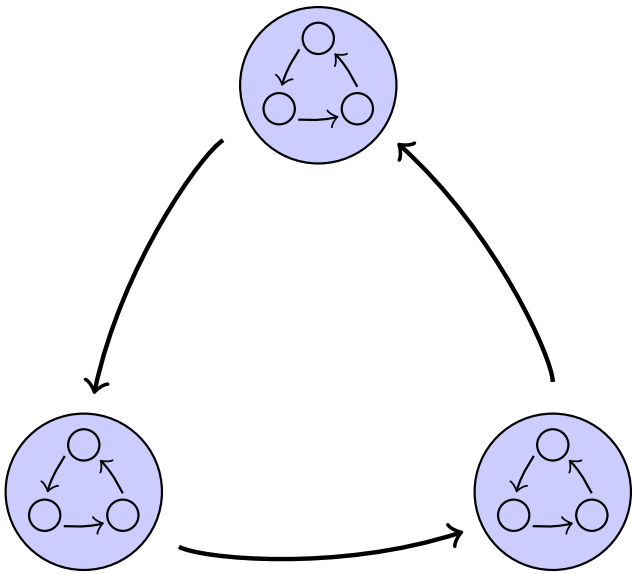
Schools, companies, etc.



Improved Communication

Interorganizational

Schools, companies, etc.



Intraorganizational

Kaner et al. (2011, p. 7) say "complete testing" could require the tester to:

- discover "every bug",
- exhaust the time allocated,
- implement every planned test,
- ...

The Lack of Standardized Terminology

"The Problem"

- Unfortunately, a search for a systematic, rigorous, and complete taxonomy for software testing revealed that the existing ones are inadequate:
  - Tebes et al. (2020) focus on *parts* of the testing process (e.g., test goal, testable entity),
  - Souza et al. (2017) prioritize organizing testing approaches over defining them, and
  - Unterkalmsteiner et al. (2014) focus on the "information linkage or transfer" (p. A:6) between requirements engineering and software testing.

Unstandardized Standards

- The structure of tours is:
  - quite general (ISO/IEC and IEEE, 2022, p. 34)

Unstandardized Standards

- The structure of tours is:
  - quite general (ISO/IEC and IEEE, 2022, p. 34)
  - “organized around a special focus” (Hamburg and Mogyorodi, 2024)

Unstandardized Standards

- Load testing is performed with:
  - loads "between anticipated conditions of low, typical, and peak usage" (ISO/IEC and IEEE, 2022, p. 5)

Unstandardized Standards

- Load testing is performed with:
  - loads "between anticipated conditions of low, typical, and peak usage" (ISO/IEC and IEEE, 2022, p. 5)
  - loads that are as large as possible (Patton, 2006, p. 86)

Unstandardized Standards

- Alpha testing is performed by:
  - "users within the organization developing the software" (ISO/IEC and IEEE, 2017, p. 17)

Unstandardized Standards

- Alpha testing is performed by:
  - "users within the organization developing the software" (ISO/IEC and IEEE, 2017, p. 17)
  - "a small, selected group of potential users" (Washizaki, 2024, p. 5-8)

Unstandardized Standards

- Alpha testing is performed by:
  - "users within the organization developing the software" (ISO/IEC and IEEE, 2017, p. 17)
  - "a small, selected group of potential users" (Washizaki, 2024, p. 5-8)
  - "roles outside the development organization" conducted "in the developer's test environment" (Hamburg and Mogyorodi, 2024)

Unstandardized Standards

- Alpha testing is performed by:
  - "users within the organization developing the software" (ISO/IEC and IEEE, 2017, p. 17)
  - "a small, selected group of potential users" (Washizaki, 2024, p. 5-8)
  - "roles outside the development organization" conducted "in the developer's test environment" (Hamburg and Mogyorodi, 2024)

"Okay testing team, we want to conduct alpha testing on our product. What's our timeline? Budget? Sample size?"

Table of Contents

Research Questions

Research Question 1

What testing approaches does the literature describe?

Research Questions

Research Question 1

What testing approaches does the literature describe?

Research Question 2

What discrepancies exist between descriptions of these testing approaches?

Research Questions

Research Question 1

What testing approaches does the literature describe?

Research Question 2

What discrepancies exist between descriptions of these testing approaches?

Research Question 3

Is it possible to resolve/reduce any of these discrepancies systematically?

Acknowledgment

- Dr. Smith and Dr. Carette have been great supervisors in the past and have, both then and now, provided me with valuable guidance and feedback
  - They have helped me refine the scope of this project
  - The project itself was originally posed by Dr. Smith back in 2020!

Acknowledgment

- Dr. Smith and Dr. Carette have been great supervisors in the past and have, both then and now, provided me with valuable guidance and feedback
  - They have helped me refine the scope of this project
  - The project itself was originally posed by Dr. Smith back in 2020!
- The format of this presentation was *heavily* based on a previous presentation by Jason Balaci, who also provided a great thesis template

Acknowledgment
